

This section will contain the final text of the rules proposed by agencies. The order of rulemaking is required to contain a citation to the legal authority upon which the order or rulemaking is based; reference to the date and page or pages where the notice of proposed rulemaking was published in the *Missouri Register*; an explanation of any change between the text of the rule as contained in the notice of proposed rulemaking and the text of the rule as finally adopted, together with the reason for any such change; and the full text of any section or subsection of the rule as adopted which has been changed from that contained in the notice of proposed rulemaking. The effective date of the rule shall be not less than thirty (30) days after the date of publication of the revision to the *Code of State Regulations*.

The agency is also required to make a brief summary of the general nature and extent of comments submitted in support of or opposition to the proposed rule and a concise summary of the testimony presented at the hearing, if any, held in connection with the rulemaking, together with a concise summary of the agency's findings with respect to the merits of any such testimony or comments which are opposed in whole or in part to the proposed rule. The ninety (90)-day period during which an agency shall file its order of rulemaking for publication in the *Missouri Register* begins either: 1) after the hearing on the proposed rulemaking is held; or 2) at the end of the time for submission of comments to the agency. During this period, the agency shall file with the secretary of state the order of rulemaking, either putting the proposed rule into effect, with or without further changes, or withdrawing the proposed rule.

**Title 5—DEPARTMENT OF ELEMENTARY AND SECONDARY EDUCATION
Division 90—Vocational Rehabilitation
Chapter 4—General Administrative Policies**

ORDER OF RULEMAKING

By the authority vested in the State Board of Education under sections 161.092, RSMo Supp. 2002 and 178.600, 178.610 and 178.620, RSMo 2000, the board amends a rule as follows:

5 CSR 90-4.410 Informal Review is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on May 1, 2003 (28 MoReg 864). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

**Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri**

ORDER OF RULEMAKING

By the authority vested in the Missouri Air Conservation Commission under section 643.050, RSMo 2000, the commission amends a rule as follows:

10 CSR 10-6.020 is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on April 15, 2003 (28 MoReg 719–724). Those sections with changes are reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: Comments were received from the Springfield-Greene County Department of Public Health & Welfare, the Missouri Limestone Producers Association, and the U.S. Environmental Protection Agency (EPA). The comments generally supported the proposed amendment but included suggestions for minor wording changes.

COMMENT: The Springfield-Greene County Department of Public Health & Welfare requested that Chemical Abstracts Service (CAS) numbers be provided for the list of compounds that are used to define Volatile Organic Compound. Including these numbers would make locating the compound's material safety data sheet easier. They also requested that the rule use chemical subscripts where possible and include the full name for all compounds for ease of reading and for consistency.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program has made the recommended change to paragraph (2)(V)9.

COMMENT: The Missouri Limestone Producers Association commented that the definition of Visible Emission in paragraph (2)(V)8. is a redundant reference to particulate matter and condensibles referenced in the definition of Air Contaminant.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program has removed the redundant reference to particulate matter in paragraph (2)(V)8. as a result of this comment. Since the term condensible is not used in the definition of Air Contaminant, the reference to condensibles is retained in the visible emission definition.

COMMENT: EPA commented that for clarification the phrase—as nonattainment areas—be inserted at the end of the proposed new sentence in paragraph (2)(N)5.

RESPONSE AND EXPLANATION OF CHANGE: The recommended phrase was added to paragraph (2)(N)5. as a result of this comment.

COMMENT: EPA suggested clarifying that criteria pollutants that are also Hazardous Air Pollutants (HAPs) are not exempt from major review by modifying the definition of Significant in paragraph (2)(S)10. For instance, lead (Pb) is a HAP and also a criteria pollutant so it continues to be a regulated pollutant for the purposes of major new source review. Also, to the extent a HAP is also a Volatile Organic Compound (VOC), a source may not use the HAP exclusion to avoid major review as a VOC source. All criteria pollutants must continue to be reviewed under 10 CSR 10-6.060(7) & (8) whether they are also identified as HAPs or not.

RESPONSE AND EXPLANATION OF CHANGE: The definition of Significant has been clarified as suggested.

COMMENT: This rule action was proposed as a package with four (4) other rule actions. Comments received on three (3) of these other rule actions redundantly included a definition for manure storage and application systems.

RESPONSE AND EXPLANATION OF CHANGE: The definition rule 10 CSR 10-6.020 is used for definitions that are common to more than one (1) rule. One common definition for manure storage and application systems has been added to subsection (2)(M) of this definition rule.

10 CSR 10-6.020 Definitions and Common Reference Tables

(2) Definitions.

(M) All terms beginning with “M.”

1. MACT (Maximum achievable control technology)—The maximum degree of reduction in emissions of the hazardous air pollutants listed in subsection (3)(C) of this rule (including a prohibition on these emissions where achievable), taking into consideration the cost of achieving emissions reductions and any non-air quality health and environmental impacts and requirements, determines is achievable for new or existing sources in the category or subcategory to which this emission standard applies, through application of measures, processes, methods, systems or techniques including, but not limited to, measures which—

A. Reduce the volume of or eliminate emissions of pollutants through process changes, substitution of materials or other modifications;

B. Enclose systems or processes to eliminate emissions;

C. Collect, capture or treat pollutants when released from a process, stack, storage or fugitive emissions point;

D. Are design, equipment, work practice or operational standards (including requirements for operational training or certification); or

E. Are a combination of subparagraphs (2)(M)1.A.–D.

2. Magnet wire coating—The process of applying a coating of electrically insulating varnish or enamel to aluminum or copper wire for use in electrical machinery.

3. Major modification—Any physical change or change in the method of operation at an installation or in the attendant air pollution control equipment that would result in a significant net emissions increase of any pollutant. A physical change or a change in the

method of operation, unless previously limited by enforceable permit conditions, shall not include:

- A. Routine maintenance, repair and replacement of parts;
 - B. Use of an alternative fuel or raw material by reason of an order under Sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, a prohibition under the Power Plant and Industrial Fuel Use Act of 1978 or by reason of a natural gas curtailment plan pursuant to the Federal Power Act;
 - C. Use of an alternative fuel or raw material, if prior to January 6, 1975, the source was capable of accommodating the fuel or material, unless the change would be prohibited under any enforceable permit condition which was established after January 6, 1975;
 - D. An increase in the hours of operation or in the production rate unless the change would be prohibited under any enforceable permit condition which was established after January 6, 1975; or
 - E. Use of an alternative fuel by reason of an order or rule under Section 125 of the Clean Air Act.
4. Malfunction—A sudden and unavoidable failure of air pollution control equipment or process equipment or of a process to operate in a normal and usual manner. Excess emissions caused by improper design shall not be deemed a malfunction.
 5. Management planner—An individual, under AHERA, who devises and writes plans for asbestos abatement.
 6. Manure storage and application systems—Any system that includes but is not limited to lagoons, manure treatment cells, earthen storage ponds, manure storage tanks, manure stockpiles, composting areas, pits and gutters within barns, litter used in bedding systems, all types of land application equipment, and all pipes, hoses, pumps and other equipment used to transfer manure.
 7. Maskant—A coating applied directly to an aerospace component to protect those areas when etching other parts of the component.
 8. Metal furniture coating—The surface coating of any furniture made of metal or any metal part which will be assembled with other metal, wood, fabric, plastic or glass parts to form a furniture piece.
 9. Model year—The annual production period of new motor vehicles designated by the calendar year in which the period ends, provided that if the manufacturer does not so designate vehicles manufactured by him/her, the model year with respect to the vehicles shall mean the twelve (12)-month period beginning January 1 of the year specified in this rule.
 10. Modification—Any physical change, or change in method of operation of, a source operation or attendant air pollution control equipment which would cause an increase in potential emissions of any air pollutant emitted by the source operation.
 11. Modification, Title I—See Title I modification.
 12. Motor tricycle—A motor vehicle operated on three (3) wheels, including a motorcycle with any conveyance, temporary or otherwise, requiring the use of a third wheel.
 13. Motor vehicle—Any self-propelled vehicle.
 14. Motorcycle—A motor vehicle operated on two (2) wheels.
 15. Multiple chamber incinerator—Any incinerator consisting of two (2) or more refractory lined combustion furnaces in series, physically separated by refractory walls, interconnected by gas passage ports or ducts and employing adequate design parameters necessary for maximum combustion of the material to be burned, the refractories having a Pyrometric Cone Equivalent of 31, tested according to the method described in the ASTM Method C-24-56 or other method approved by the department director.
 16. Multiple fixed-point monitoring—A system for monitoring VOCs where stationary monitors are placed throughout the petroleum refinery which measure atmospheric concentrations of VOCs.
- (N) All terms beginning with “N.”
1. Nearby—Nearby as used in the definition GEP stack height in subparagraph (2)(G)2.B. is defined for a specific structure or terrain feature—

A. For purposes of applying the formula provided in subparagraph (2)(G)3.B., nearby means that distance up to five (5) times the lesser of the height or the width dimension of a structure, but not greater than one-half (1/2) mile; and

B. For conducting fluid modeling or field study demonstrations under subparagraph (2)(G)3.C., nearby means not greater than one-half (1/2) mile, except that the portion of a terrain feature may be considered to be nearby which falls within a distance of up to ten (10) times the maximum height of the feature, not to exceed two (2) miles if feature achieves a height one-half (1/2) mile from the stack that is at least forty percent (40%) of the GEP stack height determined by the formula provided in subparagraph (2)(G)3.B. or twenty-six meters (26 m), whichever is greater, as measured from the ground level elevation at the base of the stack. The height of the structure or terrain feature is measured from the ground level elevation at the base of the stack.

2. Net emissions increase—This term is defined in 40 CFR 51.166(b)(3) and is incorporated by reference.

3. New tepee burner—One not in existence as of September 18, 1970.

4. NIOSH—National Institute of Occupational Safety and Health.

5. Nonattainment area—Those geographic areas in Missouri that have officially been designated by the U.S. Environmental Protection Agency in 40 CFR part 81 as nonattainment areas.

(S) All terms beginning with “S.”

1. Salvage operation—Any business, trade, industry or other activity conducted in whole or in part for the purpose of salvaging or reclaiming any product or material.

2. Sealing material—A liquid substance that does not contain asbestos which is used to cover a surface that has previously been coated with a friable asbestos-containing material for the intended purpose of preventing any asbestos fibers remaining on the surface from being disburbed into the air. This substance shall be distinguishable from the surface to which it is applied.

3. Secondary emissions—The emissions which occur or would occur as a result of the construction or operation of an installation or major modification but do not come from the installation or major modification itself. Secondary emissions must be specific, well-defined, quantifiable and impact the same general area as the installation or modification which causes the secondary emissions. Secondary emissions may include, but are not limited to:

A. Emissions from trucks, ships or trains coming to or from the installation or modification; and

B. Emissions from any off-site support source which would not be constructed or increase its emissions except as a result of the construction or operation of the major stationary source or major modification.

4. Section 502(b)(10) changes—Changes that contravene an express permit term. These changes do not include those that would violate applicable requirements or contravene federally-enforceable permit terms and conditions that are monitoring (including test methods), record keeping, reporting or compliance certification requirements.

5. Sheet basecoat—The roll coated primary interior surface coating applied to surfaces for the basic protection of buffering filling material from the metal can surface.

6. Shower room—A room between the clean room and the equipment room in the worker decontamination enclosure. This room shall be equipped with running hot and cold water that is suitably arranged for complete showering during decontamination.

7. Shutdown—The cessation of operation of any air pollution control equipment or process equipment, excepting the routine phasing out of process equipment.

8. Shutdown, permanent—See permanent shutdown.

9. Side seam coating (three (3)-piece)—A can surface coating to seal the connecting edge of a formed metal sheet in the manufacture of a three (3)-piece can.

10. Significant—A net emissions increase or potential to emit at a rate equal to or exceeding the *de minimis* levels or create an ambient air concentration at a level greater than those listed in 10 CSR 10-6.060(11)(D) Table 4, or any emissions rate or any net emissions increase associated with an installation subject to 10 CSR 10-6.060 which would be constructed within ten kilometers (10 km) of a Class I area and have an air quality impact on the area equal to or greater than one microgram per cubic meter ($1 \mu\text{g}/\text{m}^3$) (twenty-four (24)-hour average). For purposes of new source review under 10 CSR 10-6.060 sections (7) and (8), net emission increases of hazardous air pollutants exceeding the *de minimis* levels are considered significant only if they are also criteria pollutants.

11. Smoke—Small gas-borne particles resulting from combustion, consisting of carbon, ash and other material.

12. Solvent—Organic materials which are liquid at standard conditions and which are used as dissolves, viscosity reducers or cleaning agents.

13. Solvent metal cleaning—The process of cleaning soils from metal surfaces by cold cleaning or open-top vapor degreasing or conveyorized degreasing.

14. Solvent volatility—Reid vapor pressure.

15. Source gas volume—The volume of gas arising from a process or other source operation.

16. Source operation—See emission unit.

17. Springfield-Greene County area—The geographical area contained within Greene County.

18. St. Louis metropolitan area—The geographical area comprised of St. Louis, St. Charles, Jefferson and Franklin Counties and the City of St. Louis.

19. Stack—Any spatial point in an installation designed to emit air contaminants into ambient air. An accidental opening such as a crack, fissure, or hole is a source of fugitive emissions, not a stack.

20. Stack in existence—The owner or operator had—1) begun, or caused to begin, a continuous program of physical on-site construction of the stack; or 2) entered into binding agreements or contractual operations, which could not be cancelled or modified without substantial loss to the owner or operator, to undertake a program of construction of the stack to be completed in a reasonable time.

21. Staff director—Director of the Air Pollution Control Program of the Department of Natural Resources.

22. Standard conditions—A gas temperature of seventy degrees Fahrenheit (70°F) and a gas pressure of 14.7 pounds per square inch absolute (psia).

23. Start-up—The setting into operation of any air pollution control equipment or process equipment, except the routine phasing in of process equipment.

24. State—Any nonfederal permitting authority, including any local agency, interstate association or statewide program. When clear from its context, state shall have its conventional territorial definition.

25. State implementation plan—A series of plans adopted by the commission, submitted by the director, and approved by the administrator, detailing methods and procedures to be used in attaining and maintaining the ambient air quality standards in Missouri.

26. Storage tank—Any tank, reservoir or vessel which is a container for liquids or gases, where no manufacturing process or part of it, takes place.

27. Structural item—Roofs, walls, ceilings, floors, structural supports, pipes, ducts, fittings and fixtures that have been installed as an integral part of any structure.

28. Submerged fill pipe—Any fill pipe the discharge opening of which is entirely submerged when the liquid level is six inches (6") above the bottom of the tank. Submerged fill pipe when applied to a tank which is loaded from the side is defined as any fill pipe, the discharge opening of which is entirely submerged when the liquid level is eighteen inches (18") or twice the diameter of the fill pipe, whichever is greater, above the bottom of the tank.

29. Synthesized pharmaceutical manufacturing—Manufacture of pharmaceutical products by chemical synthesis.

(V) All terms beginning with "V."

1. Vacuum producing system—Any reciprocating, rotary or centrifugal blower or compressor or any jet ejector device that takes suction from a pressure below atmospheric on a system containing volatile hydrocarbons.

2. Vapor recovery system—A vapor gathering system capable of collecting the hydrocarbon vapors and gases discharged and a vapor disposal system capable of processing the hydrocarbon vapors and gases so as to limit their emission to the atmosphere.

3. Vapor-mounted seal—A primary seal mounted so there is an annular vapor space underneath the seal. The annular vapor space is bounded by the bottom of the primary seal, the tank wall, the liquid surface and the floating roof.

4. Vapor tight—When applied to a delivery vessel or vapor recovery system as one that sustains a pressure change of no more than seven hundred fifty (750) pascals (three inches (3") of H_2O) in five (5) minutes when pressurized to a gauge pressure of four thousand five hundred (4,500) pascals (eighteen inches (18") of H_2O) or evacuated to a gauge pressure of one thousand five hundred (1,500) pascals (six inches (6") of H_2O).

5. Varnish—An unpigmented surface coating containing VOC and composed of resins, oils, thinners and driers used to give a glossy surface to wood, metal, etc.

6. Vehicle—Any mechanical device on wheels, designed primarily for use on streets, roads or highways, except those propelled or drawn by human or animal power or those used exclusively on fixed rails or tracks.

7. Vinyl coating—The application of a decorative or protective topcoat, or printing or vinyl coated fabric or vinyl sheet.

8. Visible emission—Any discharge of an air contaminant, including condensibles, which reduces the transmission of light or obscures the view of an object in the background.

9. Volatile organic compounds (VOC)—For all areas in Missouri VOC means any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, that participates in atmospheric photochemical reactions to produce ozone. The following compounds will not be considered VOCs because of their known lack of participation in the atmospheric reactions to produce ozone:

CAS #	Hazardous Air Pollutant
138495428	1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC 43-10mee);
690391	1,1,1,3,3,3-hexafluoropropane (HFC-236fa);
679867	1,1,2,2,3-pentafluoropropane (HFC-245ca);
24270664	1,1,2,3,3-pentafluoropropane (HFC-245ea);
431312	1,1,1,2,3-pentafluoropropane (HFC-245eb);
460731	1,1,1,3,3-pentafluoropropane (HFC-245fa);
431630	1,1,1,2,3,3-hexafluoropropane (HFC-236ea);
406586	1,1,1,3,3-pentafluorobutane (HFC-365mfc);
422560	3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca);
507551	1,3-dichloro-1,1,2,2,3-pentafluoropropane HCFC-225cb);
354234	1,2-dichloro-1,1,2-trifluoroethane (HCFC-123a);
1615754	1-chloro-1-fluoroethane (HCFC-151a);
163702076	1,1,1,2,2,3,3,4,4-nonafluoro-4-methoxybutane ($\text{C}_4\text{F}_9\text{OCH}_3$);
163702087	2-(difluoromethoxymethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(\text{CF}_3)_2\text{CFCF}_2\text{OCH}_3$);
163702054	1-ethoxy-1,1,2,2,3,3,4,4,4-nonafluorobutane ($\text{C}_4\text{F}_9\text{OC}_2\text{H}_5$);
163702065	2-(ethoxydifluoromethyl)-1,1,1,2,3,3,3-heptafluoropropane ($(\text{CF}_3)_2\text{CFCF}_2\text{OC}_2\text{H}_5$);
71556	1,1,1-trichloroethane (methyl chloroform);

67641	acetone;
25497294	chlorodifluoroethane (HCFC-142b);
75456	chlorodifluoromethane (HCFC-22);
593704	chlorofluoromethane (HCFC-31);
76153	chloropentafluoroethane (CFC-115);
63938103	chlorotetrafluoroethane (HCFC-124);
75718	dichlorodifluoromethane (CFC-12);
1717006	dichlorofluoroethane (HCFC-141b);
1320372	dichlorotetrafluoroethane (CFC-114);
34077877	dichlorotrifluoroethane (HCFC-123);
75376	difluoroethane (HFC-152a);
75105	difluoromethane (HFC-32);
74840	ethane;
353366	ethylfluoride (HFC-161);
74828	methane;
79209	methyl acetate;
75092	methylene chloride (dichloromethane);
98566	parachlorobenzotrifluoride (PCBTF);
354336	pentafluoroethane (HFC-125);
127184	perchloroethylene;
359353	tetrafluoroethane (HFC-134);
811972	tetrafluoroethane (HFC-134a);
75694	trichlorofluoromethane (CFC-11);
26523648	trichlorotrifluoroethane (CFC-113);
306832	trifluorodichloroethane (HCFC-123);
27987060	trifluoroethane (HFC-143a);
75467	trifluoromethane (HFC-23);
0	cyclic, branched or linear, completely fluorinated alkanes;
0	cyclic, branched or linear, completely fluorinated ethers with no unsaturations;
0	cyclic, branched or linear, completely methylated siloxanes;
0	cyclic, branched or linear, completely fluorinated tertiary amines with nonsaturations; and
0	sulfur-containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorines.

VOC may be measured by a reference method, an equivalent method, an alternative method or by procedures specified in either 10 CSR 10-6.030 or 40 CFR 60. These methods and procedures may measure nonreactive compounds so an owner or operator must exclude these nonreactive compounds when determining compliance.

Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri

ORDER OF RULEMAKING

By the authority vested in the Missouri Air Conservation Commission under section 643.050, RSMo 2000, the commission amends a rule as follows:

10 CSR 10-6.060 is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on April 15, 2003 (28 MoReg 724-728). Those sections with changes are reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: The Missouri Limestone Producers Association, the U.S. Environmental Protection Agency (EPA), and Ameren Services provided comments on this proposed amendment. The comments generally supported the amendment with recommendations to clarify the state's approach concerning how fugitive emissions are counted and concerning the methods and circumstances for obtaining emission offsets.

Due to the similarity in the following two (2) comments, one (1) response that addresses both comments can be found at the end of these two (2) comments:

COMMENT: The Missouri Limestone Producers noted that the language in section (7) specifies that fugitive emissions are not counted when determining applicability for major review. The practice of not counting fugitives should be extended to minor sources. This change would be consistent with the EPA's policies.

COMMENT: EPA recommended that the wording in section (7) might be improved to even further clarify when fugitives must be considered for applicability purposes. Instead of expressing the idea that fugitives are not counted when not on the list, revise it to affirm that fugitives are counted when on the list.

RESPONSE AND EXPLANATION OF CHANGE: The purpose of this change was to clarify the fact that fugitive emissions are counted when calculating potential to emit for named sources. It is only for non-named sources that fugitive emissions are not counted, and then they are ignored only for the purpose of determining rule applicability. This is congruent with the federal new source review rules. Fugitive emissions are always considered when evaluating air quality impacts. Rock crushing plants are not on the named list, therefore fugitive emissions are not to be counted for determining applicability with section (7).

EPA does not address when fugitive emissions are to be used in determining applicability in individual states' minor source programs. Fugitive emissions, even from sources subject to minor review, can have significant impacts on ambient air, and section 643.075, RSMo makes no distinction between stack emission and fugitive emissions. The language of subsection (7)(A) has been changed for clarification as a result of this comment.

COMMENT: EPA commented that section (7) proposed language removes the emission offset requirements for construction or major modification for projects that have the potential to emit the nonattainment pollutant in amounts equal to or greater than the *de minimis* levels. If these offset requirements are removed, Missouri should provide a demonstration as part of the State Implementation Plan (SIP) submittal showing that the elimination of the offset requirements for these sources will not have an adverse impact on maintaining/achieving the National Ambient Air Quality Standards (NAAQS) in St. Louis.

RESPONSE: Prior to this proposed amendment, section (7) of this rule did require offsets for projects exceeding the *de minimis* levels of the nonattainment pollutant. The proposed rule change codifies recent practices of the department by removing this requirement. The old growth and increment system was to have been eliminated during a past SIP revision. The growth and increment system was replaced with a reasonable further progress approach in a previous SIP submittal. The St. Louis area has attained the one-hour ozone standard under this reasonable further progress approach. The proposed language retains offset requirements for all major nonattainment projects. Therefore, this is not a relaxation, but instead a clarification of intended requirements. The proposed amendment is congruent with the federal new source review rules. No changes have been made to the rule as a result of this comment.

COMMENT: EPA commented that the offset requirements in paragraph (7)(B)1. replaced statutory-like language replacing it with

weaker language that specifies that offsets only be adequate for meeting reasonable further progress goals. Offsets of no less than one to one must be retained in nonattainment areas, and they must be done according to Section 173(a)(1)(A) of the Clean Air Act.

RESPONSE AND EXPLANATION OF CHANGE: The intention of the proposed amendment was to clarify and simplify the rule not to relax offset requirements. The definition of Offset in 10 CSR 10-6.020(2)(O)1. clearly states that offsets must be no less than one to one. Offsets must be obtained according to the requirements of Section 173(a)(1)(A). Therefore, a phrase was added referencing these requirements as a result of this comment.

COMMENT: EPA commented that section (8) proposed language continues to be confusing with respect to treatment of fugitive emissions and whether they are considered as part of the applicability thresholds.

RESPONSE AND EXPLANATION OF CHANGE: Fugitive emissions are not counted when determining applicability unless the construction is being done by a named source. The rule has been clarified as a result of this comment.

COMMENT: EPA provided comments on paragraph (8)(A)3. which codifies the state's previous SIP commitment to retain emission offsets in the 8-hour St. Louis ozone nonattainment area. This section contemplates a future scenario in which contingency measures are triggered and major source permitting will then revert to a traditional part D program requiring both emissions offsets and Lowest Achievable Emission Rate (LAER) controls. The SIP requires that both offsets and LAER be retained through the end of the 2003 ozone season, and the rule language should be modified to assure that these requirements are retained until November 1, 2003. Also, the new language specifies only that offsets only be adequate for meeting reasonable further progress goals. Offsets of no less than one to one must be retained in nonattainment areas, and they must be done according to Section 173(a)(1)(A) of the Clean Air Act.

RESPONSE AND EXPLANATION OF CHANGE: The soonest that this rule can be effective is October 30, 2003, so the existing rules will stand until that time. The term offsets is defined in 10 CSR 10-6.020(2)(O)1., which specifies that the minimum offset ratio is one to one. Offsets must be obtained according to the requirements of Section 173(a)(1)(A). Therefore, the only change made as a result of this comment was a phrase added to refer to the Section 173(a)(1)(A) requirements of the Clean Air Act.

COMMENT: Ameren Services commented that paragraph (8)(A)3. requires offsets regardless of the air quality impact of the new or modified source. Instead of offsets, sources should be given the option of performing an air quality analysis to demonstrate that the project will have a negligible impact on the maintenance area. The rationale for this is twofold. First, the one-hour ozone SIP has yet to be completely implemented and EPA's Oxides of Nitrogen (NO_x) SIP call will yield yet further reductions in the nonattainment area. The reductions in emissions from these were apparently not required to achieve attainment of the one-hour ozone standard. The second concern is that offsets will not be available, thus preventing the permitting of new projects.

RESPONSE: The proposed language in paragraph (8)(A)3. is necessary to fulfill the state's obligation under the maintenance plan. Language cannot be removed or changed without changing the maintenance plan. When the more difficult to attain eight-hour ozone designations are made it seems certain that St. Louis will be designated as nonattainment making major projects again subject to LAER as well as offsets. It seems inappropriate to allow projects to forego offsets during the time period between nonattainment designations. The reductions from the NO_x SIP call should help to improve air quality

in St. Louis. Dropping the offset requirements may require Missouri to adopt stricter NO_x controls than what EPA proposes. No changes were made as a result of this comment.

COMMENT: Ameren Services noted that paragraph (8)(A)3. makes an incorrect reference to subsections (7)(A) through (E).

RESPONSE AND EXPLANATION OF CHANGE: The department agrees and has corrected the reference in response to this comment and renumbered subsections (7)(D) and (7)(E) to (7)(C) and (7)(D).

10 CSR 10-6.060 Construction Permits Required

(7) Nonattainment Area Permits.

(A) Solely for the purpose of determining applicability with section (7) of this rule, fugitive emissions shall be considered when calculating potential to emit for construction and modification only for installations belonging to one of the source categories listed in 10 CSR 10-6.020(3)(B), Table 2.

(B) A permit shall not be issued for the construction of a major operation for the nonattainment pollutants, or for a major modification for the nonattainment pollutant of an existing major operation, unless the following requirements, in addition to section (6) are met:

1. By the time the source is to commence operation, sufficient emissions offsets shall be obtained as required to ensure reasonable further progress toward attainment of the applicable national ambient air quality standard and consistent with the requirements of Section 173(a)(1)(A) of the Clean Air Act;

2. In the case of a new or modified installation which is located in a zone (within the nonattainment area) identified by the administrator, in consultation with the Secretary of Housing and Urban Development, as a zone to which economic development should be targeted, emissions of that pollutant resulting from the proposed new or modified installation will not cause or contribute to emissions levels which exceed the allowance permitted for that pollutant for that zone from new or modified installations;

3. Offsets have been obtained in accordance with the offset and banking procedures in 10 CSR 10-6.410;

4. The administrator has not determined that the state implementation plan is not being adequately implemented for the nonattainment area in which the proposed source is to be constructed or modified;

5. Temporary installation and portable sources shall be exempt from this subsection provided that the source applies BACT for each pollutant emitted in a significant amount;

6. The applicant must provide documentation establishing that all installations in Missouri which are owned or operated by the applicant (or by any entity controlling, controlled by or under common control with the applicant) are subject to emission limitations and are in compliance, or are on a schedule for compliance, with all applicable requirements;

7. The applicant shall document that the provisions in its application for the installation and operation of pollution control equipment or processes will meet the lowest achievable emission rate (LAER) for the nonattainment pollutant. Temporary installations and portable equipment shall be exempt from LAER, provided the installation applies BACT for each pollutant emitted in a significant amount;

8. For phased construction projects, the determination of LAER shall be reviewed and modified as appropriate at the latest reasonable time prior to commencement of construction of each independent phase of construction;

9. The applicant must provide an alternate site analysis; and

10. The applicant shall provide an analysis of impairment to visibility in any Class I area (those designated in subsection (12)(I) of this rule) that would occur as a result of the installation or major

modification and as a result of the general, commercial, residential, industrial and other growth associated with the installation or major modification.

(C) Any construction or modification that will impact a federal Class I area shall be subject to the provisions of subsection (12)(H) of this rule.

(D) NO_x Requirements. For the purpose of section (7), any significant increase due to the levels of emission of oxides of nitrogen, shall be considered significant for ozone. Any installation with the potential to emit one hundred (100) tons per year of oxides of nitrogen located within an area which is nonattainment for ozone, must comply with the specific permit requirements of the nonattainment provisions of section (7) and with section (8) for any significant increase due to the levels of emission of oxides of nitrogen.

(8) Attainment and Unclassified Area Permits.

(A) Applicability.

1. Applicants for construction or major modification of installations which are in a category named in 10 CSR 10-6.020(3)(B), Table 2, excluding category number 27, and have the potential to emit one hundred (100) tons or more of any pollutant including all fugitive emissions shall adhere to the requirements of this section, in addition to the requirements of section (6) of this rule.

2. Applicants for construction or major modification of installations with the potential to emit two hundred and fifty (250) tons or more of any pollutant shall comply with the requirements of this section, in addition to the requirements of section (6). Solely for purposes of applicability of this section, fugitive emissions shall only be counted if the installation belongs to one of the source categories listed in 10 CSR 10-6.020(3)(B), Table 2.

3. Applicants in the St. Louis Metropolitan Ozone Maintenance Area for construction of major operations of VOC or oxides of nitrogen or for the major modification of a major operation where the net emission increase exceeds forty (40) tons or more per year of VOC or oxides of nitrogen shall obtain offsets and shall adhere to the requirements of this section, in addition to the requirements of section (6) of this rule. These offsets shall be obtained in accordance with the offset and banking procedures in 10 CSR 10-6.410. By the time the source is to commence operation, sufficient emissions offsets shall be as required to maintain the applicable national ambient air quality standard by the applicable date and consistent with the requirements of Section 173(a)(1)(A) of the Clean Air Act. In the event that the contingency measures of the St. Louis Metropolitan Maintenance Plan are triggered, construction or major modification of a major operation of VOC or oxides of nitrogen shall adhere to the requirements of section (7) of this rule.

Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri

ORDER OF RULEMAKING

By the authority vested in the Missouri Air Conservation Commission under section 643.050, RSMo 2000, the commission adopts a rule as follows:

10 CSR 10-6.061 is adopted.

A notice of proposed rulemaking containing the text of the proposed rule was published in the *Missouri Register* on April 15, 2003 (28 MoReg 728-731). Those sections with changes are reprinted here.

This proposed rule becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: The Associated General Contractors of Missouri, U.S. Environmental Protection Agency (EPA), Boeing Company, and Friends of Agriculture for the Reform of Missouri Environmental Regulations (F.A.R.M.E.R.) provided comments on this rule. The Associated General Contractors of Missouri and the Boeing Company suggested either new exemptions or the clarification of proposed exemptions. EPA noted that for some exemptions it was not intuitively obvious that the activities were *de minimis* and asked that the department provide a justification when submitting this rule to them for inclusion in the State Implementation Plan. EPA also made suggestions to improve several specific exemptions. F.A.R.M.E.R. requested that livestock markets and livestock operations that have previously been constructed be exempted from the rule.

COMMENT: The Associated General Contractors of Missouri commented that the Managing For Results Team identified screening plants for already crushed material in aggregate production as an activity that should also be exempt and requested that the department consider including this exemption in the final rule.

RESPONSE: Staff reviewed this activity and concluded that product screening activities have the potential to have relatively high emission rates and consequently relatively high ambient air impacts. Without conditions such as emission limits or controls or minimum setbacks from the property boundaries it would not be prudent to provide a broad exemption for these sources.

In addition, the spreadsheet tool (Ambient Air Quality/Construction Permit Application—Stone Quarrying and Processing Plants) is available for rock crushing plants and product screening activities. Use of this tool has dramatically reduced permit review time for these types of projects. A pre-construction waiver is also available for these types of projects. Waivers allow construction of minor sources to begin prior to permit issuance provided the applicant accepts the liability and understands that the permit may not be approved. Because of the potential air quality impacts from aggregate screening activities and the other permit streamlining options available, no changes were made to the rule as a result of this comment.

Due to the similarity in the following two (2) comments, one (1) response can be found at the end of these two (2) comments:

COMMENT: EPA commented that the proposed amendment adds about seventy-five (75) new activities that will be exempt from the minor source construction permit program. Some of these activities are intuitively *de minimis*. For other activities, Missouri must submit a substantial analysis demonstrating that the new exemptions will not interfere with attainment and maintenance of any National Ambient Air Quality Standards (NAAQS), particularly in St. Louis and Kansas City. The package should include substantive documentation showing—through the use of emission factors, production limits, or other relevant information—the basis for each category of exempt equipment.

COMMENT: The Associated General Contractors of Missouri noted that most of the activities being exempted were already exempt by either rule or policy and that this proposed amendment serves only as a consolidation.

RESPONSE: While not a strict consolidation, most of the activities listed in the new rule were either previously exempted by rule or by policy. Many of the additions are indeed, intuitively *de minimis*. For those that aren't, the department's Air Pollution Control Program will prepare a justification document to accompany this rule change when submitting the rule for inclusion in the State Implementation

Plan (SIP). No changes were made to the rule as a result of this comment.

COMMENT: EPA recommended that the exemption listed in part (3)(A)2.T.(IX) be clarified such that this exemption is only for beverage alcohol, and not for tanks at facilities like an ethanol plant.

RESPONSE AND EXPLANATION OF CHANGE: A phrase to clarify the intent of this exemption has been added as a result of this comment.

COMMENT: EPA commented that the exemption for batch mixing of inks, coating, or paints provided in part (3)(A)2.V.(I) should include requirements for good housekeeping similar to those found in the auto body repair and refinishing exemption.

RESPONSE AND EXPLANATION OF CHANGE: Good housekeeping requirements have been added to this exemption as a result of this comment.

COMMENT: EPA commented that care must be used in calculation techniques to make sure that sources are not exempted when they should actually be subject to major review. Subsection (3)(C) does make it clear that projects otherwise subject to major review are not exempt and recommended that this requirement be moved to the front of the rule. This change in organization will help to prevent this from being overlooked.

RESPONSE AND EXPLANATION OF CHANGE: The language from subsection (3)(C) has been moved to section (1) as a result of this comment.

COMMENT: The Boeing Company noted their support for the proposed rule, and commented on the combustion equipment exemption. In addition to providing a simple heat input exemption the language also imposes a threshold of one hundred fifty (150) pounds per day of any air contaminant. This imposes a burden on an operator because an emission calculation is required, and most operators will have to seek expert advice to do this calculation. Boeing also commented that the more liberal exemption for heating units of twenty (20) million British thermal units should be extended to industrial facilities where the current exemption is only for heating units that have a heat input of less than ten (10) million British thermal units. In addition, a new permit-by-rule category should be considered for boilers that are too large to be exempt but too small to require emission controls in a Reasonably Available Control Technologies (RACT), a New Source Performance Standard (NSPS), or a National Emission Standards for Hazardous Air Pollutants (NESHAP) rule.

RESPONSE: The calculation required to show that the emissions from a small boiler will be less than one hundred fifty (150) pounds per day is not unduly burdensome. The department gladly assists potential applicants with this calculation. There are other exemptions that require emission calculations, so this is not inconsistent with other exemptions. Commercial facilities seldom have other air pollution activities, so providing a more liberal exemption to commercial facilities than to industrial facilities does have merit. The concern is a situation where industrial facilities add small boilers where the air quality resource is already impacted by the other emissions from that facility. Small boilers will be added to the list of categories that will be examined as potential permit-by-rule categories. No changes were made to the rule as a result of this comment.

COMMENT: Boeing commented on subparagraph (3)(A)2.H. noting that the exemption does not apply to fugitive dust controls unless a control efficiency can be assigned to the control equipment. It is unclear why the need for a construction permit would hinge on whether a control efficiency can be assigned. If the exemption is intended to exclude such activities as haul road dust suppression, perhaps those activities could be described directly instead.

RESPONSE AND EXPLANATION OF CHANGE: Activities that generate fugitive dust are not exempted by this subparagraph, only the control equipment. The language has been clarified to reflect this intent as a result of this comment.

COMMENT: F.A.R.M.E.R. provided detailed comments on the regulatory background for livestock exemptions. In order to resolve ongoing litigation related to livestock exemptions, F.A.R.M.E.R. recommended exemption clarification language for the operating permit rule-and-permit by rule language for new livestock operations.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program is adding a livestock markets and operations permit by rule category to the new rule for permits by rule and has clarified the livestock exemption language in subparagraph (3)(A)2.D.

10 CSR 10-6.061 Construction Permit Exemptions

(1) Applicability. This rule shall apply to all installations in Missouri. The provisions of section (3) of this rule notwithstanding, 10 CSR 10-6.060 shall apply to any construction, reconstruction, alteration or modification which—

(A) Is expressly required by an operating permit; or

(B) Is subject to federally-mandated construction permitting requirements set forth in sections (7), (8), or (9), or any combination of these, of 10 CSR 10-6.060.

(3) General Provisions. The following construction or modifications are not required to obtain a permit under 10 CSR 10-6.060:

(A) Exempt Emission Units.

1. The following combustion equipment is exempt from 10 CSR 10-6.060 if the equipment emits only combustion products, and the equipment produces less than one hundred fifty (150) pounds per day of any air contaminant:

A. Any combustion equipment using exclusively natural gas or liquefied petroleum gas or any combination of these with a capacity of less than ten (10) million British thermal units (Btus) per hour heat input;

B. Any combustion equipment with a capacity of less than one (1) million Btus per hour heat input;

C. Drying or heat treating ovens with less than ten (10) million Btus per hour capacity provided the oven does not emit pollutants other than the combustion products and the oven is fired exclusively by natural gas, liquefied petroleum gas, or any combination thereof; and

D. Any oven with a total production of yeast leavened bakery products of less than ten thousand (10,000) pounds per operating day heated either electrically or exclusively by natural gas firing with a maximum capacity of less than ten (10) million Btus per hour.

2. The following establishments, systems, equipment and operations are exempt from 10 CSR 10-6.060:

A. Office and commercial buildings, where emissions result solely from space heating by natural or liquefied petroleum gas of less than twenty (20) million Btus per hour heat input. Incinerators operated in conjunction with these sources are not exempt unless the incinerator operations are exempt under another section of this rule;

B. Comfort air conditioning or comfort ventilating systems not designed or used to remove air contaminants generated by, or released from, specific units of equipment;

C. Equipment used for any mode of transportation;

D. Livestock markets and livestock operations, including animal feeding operations and concentrated animal feeding operations as those terms are defined by 40 CFR 122.23 and all manure storage and application systems associated with livestock markets or livestock operations, that were constructed on or before November 30, 2003. This exemption includes any change, installation, construction

or reconstruction of a process, process equipment, emission unit, or air cleaning device after November 30, 2003, unless such change, installation, construction or reconstruction involves an increase in the operation's capacity to house or grow animals.

E. Any grain handling, storage and drying facility which—

(I) Is in noncommercial use only (used only to handle, dry or store grain produced by the owner if) —

(a) The total storage capacity does not exceed seven hundred fifty thousand (750,000) bushels;

(b) The grain handling capacity does not exceed four thousand (4,000) bushels per hour; and

(c) The facility is located at least five hundred feet (500') from any recreational area, residence or business not occupied or used solely by the owner;

(II) Is in commercial use and the total storage capacity of the new and any existing facility(ies) does not exceed one hundred ninety thousand (190,000) bushels; or

(III) The installation of additional grain storage capacity in which there is no increase in hourly grain handling capacity and existing grain receiving and loadout equipment are utilized;

F. Restaurants and other retail establishments for the purpose of preparing food for employee and guest consumption;

G. Any wet sand and gravel production facility that obtains its material from subterranean and subaqueous beds where the deposits of sand and gravel are consolidated granular materials resulting from natural disintegration of rock and stone and whose maximum production rate is less than five hundred (500) tons per hour. All permanent in-plant roads shall be paved and cleaned, or watered, or properly treated with dust-suppressant chemicals as necessary to achieve good engineering control of dust emissions. Only natural gas shall be used as a fuel when drying;

H. Equipment solely installed for the purpose of controlling fugitive dust;

I. Equipment or control equipment which eliminates all emissions to the ambient air;

J. Equipment, including air pollution control equipment, but not including an anaerobic lagoon, that emits odors but no regulated air pollutants;

K. Residential wood heaters, cookstoves or fireplaces;

L. Laboratory equipment used exclusively for chemical and physical analysis or experimentation, except equipment used for controlling radioactive air contaminants;

M. Recreational fireplaces;

N. Stacks or vents to prevent the escape of sewer gases through plumbing traps for systems handling domestic sewage only. Systems which include any industrial waste do not qualify for this exemption;

O. Noncommercial incineration of dead animals, the on-site incineration of resident animals for which no consideration is received or commercial profit is realized as authorized in section 269.020.6, RSMo 2000;

P. The following miscellaneous activities:

(I) Use of office equipment and products, not including printing establishments or businesses primarily involved in photographic reproduction. This exemption is solely for office equipment that is not part of the manufacturing or production process at the installation;

(II) Tobacco smoking rooms and areas;

(III) Hand-held applicator equipment for hot melt adhesives with no volatile organic compound (VOC) in the adhesive formula;

(IV) Paper trimmers and binders;

(V) Blacksmith forges, drop hammers, and hydraulic presses;

(VI) Hydraulic and hydrostatic testing equipment; and

(VII) Environmental chambers, shock chambers, humidity chambers, and solar simulators provided no hazardous air pollutants are emitted by the process;

Q. The following internal combustion engines:

(I) Portable electrical generators that can be moved by hand without the assistance of any motorized or non-motorized vehicle, conveyance or device;

(II) Spark ignition or diesel fired internal combustion engines used in conjunction with pumps, compressors, pile drivers, welding, cranes, and wood chippers or internal combustion engines or gas turbines of less than two hundred fifty (250) horsepower rating; and

(III) Laboratory engines used in research, testing, or teaching;

R. The following quarries, mineral processing, and biomass facilities:

(I) Drilling or blasting activities;

(II) Concrete or aggregate product mixers or pug mills with a maximum rated capacity of less than fifteen (15) cubic yards per hour;

(III) Rip Rap production processes consisting only of a grizzly feeder, conveyors, and storage, not including additional hauling activities associated with Rip Rap production;

(IV) Sources at biomass recycling, composting, landfill, publicly owned treatment works (POTW), or related facilities specializing in the operation of, but not limited to tub grinders powered by a motor with a maximum output rating of ten (10) horsepower, hogs and shredders and similar equipment powered by a motor with a maximum output rating of twenty-five (25) horsepower, and other sources at such facilities with a total throughput less than five hundred (500) tons per year; and

(V) Landfarming of soils contaminated only with petroleum fuel products where the farming beds are located a minimum of three hundred feet (300') from the property boundary;

S. The following kilns and ovens:

(I) Kilns with a firing capacity of less than ten (10) million Btus per hour used for firing ceramic ware, heated exclusively by natural gas, liquefied petroleum gas, electricity, or any combination thereof; and

(II) Electric ovens or kilns used exclusively for curing or heat-treating provided no Hazardous Air Pollutants (HAPs) or VOCs are emitted;

T. The following food and agricultural equipment:

(I) Any equipment used in agricultural operations to grow crops;

(II) Equipment used exclusively to slaughter animals. This exemption does not apply to other slaughterhouse equipment such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating equipment;

(III) Commercial smokehouses or barbecue units in which the maximum horizontal inside cross-sectional area does not exceed twenty (20) square feet;

(IV) Equipment used exclusively to grind, blend, package, or store tea, cocoa, spices or coffee;

(V) Equipment with the potential to dry, mill, blend, grind, or package less than one thousand (1,000) pounds per year of dry food products such as seeds, grains, corn, meal, flour, sugar, and starch;

(VI) Equipment with the potential to convey, transfer, clean, or separate less than one thousand (1,000) tons per year of dry food products or waste from food production operations;

(VII) Storage equipment or facilities containing dry food products that are not vented to the outside atmosphere or which have the potential to handle less than one thousand (1,000) tons per year;

(VIII) Coffee, cocoa, and nut roasters with a roasting capacity of less than fifteen (15) pounds of beans or nuts per hour, and any stoners or coolers operated with these roasters;

(IX) Containers, reservoirs, tanks, or loading equipment used exclusively for the storage or loading of beer, wine, or other alcoholic beverages produced for human consumption;

(X) Brewing operations at facilities with the potential to produce less than three (3) million gallons of beer per year; and

(XI) Fruit sulfuring operations at facilities with the potential to produce less than ten (10) tons per year of sulfured fruits and vegetables;

U. Batch solvent recycling equipment provided the recovered solvent is used primarily on-site, the maximum heat input is less than one (1) million Btus per hour, the batch capacity is less than one hundred fifty (150) gallons, and there are no solvent vapor leaks from the equipment which exceed five hundred (500) parts per million;

V. The following surface coating and printing operations:

(I) Batch mixing of inks, coatings, or paints provided good housekeeping is practiced, spills are cleaned up as soon as possible, equipment is maintained according to manufacturer's instruction and property is kept clean. In addition, all waste inks, coating, and paints shall be disposed of properly. Prior to disposal all liquid waste shall be stored in covered container. This exemption does not apply to ink, coatings, or paint manufacturing facilities;

(II) Any powder coating operation, or radiation cured coating operation where ultraviolet or electron beam energy is used to initiate a reaction to form a polymer network;

(III) Any surface coating source that employs solely non-refillable handheld aerosol cans; and

(IV) Surface coating operations utilizing powder coating materials with the powder applied by an electrostatic powder spray gun or an electrostatic fluidized bed;

W. The following metal working and handling equipment:

(I) Carbon dioxide (CO₂) lasers, used only on metals and other materials that do not emit a HAP or VOC in the process;

(II) Laser trimmers equipped with dust collection attachments;

(III) Equipment used for pressing or storing sawdust, wood chips, or wood shavings;

(IV) Equipment used exclusively to mill or grind coatings and molding compounds in a paste form provided the solution contains less than one percent (1%) VOC by weight;

(V) Tumblers used for cleaning or deburring metal products without abrasive blasting;

(VI) Batch mixers with a rated capacity of fifty-five (55) gallons or less provided the process will not emit hazardous air pollutants;

(VII) Equipment used exclusively for the mixing and blending of materials at ambient temperature to make water-based adhesives provided the process will not emit hazardous air pollutants;

(VIII) Equipment used exclusively for the packaging of lubricants or greases;

(IX) Platen presses used for laminating provided the process will not emit hazardous air pollutants;

(X) Roll mills or calendars for rubber or plastics provided the process will not emit hazardous air pollutants;

(XI) Equipment used exclusively for the melting and applying of wax containing less than one percent (1%) VOC by weight;

(XII) Equipment used exclusively for the conveying and storing of plastic pellets; and

(XIII) Solid waste transfer stations that receive or load out less than fifty (50) tons per day of nonhazardous solid waste;

X. The following liquid storage and loading equipment:

(I) Storage tanks and vessels having a capacity of less than five hundred (500) gallons; and

(II) Tanks, vessels, and pumping equipment used exclusively for the storage and dispensing of any aqueous solution which contains less than one percent (1%) by weight of organic compounds. Tanks and vessels storing the following materials are not exempt:

(a) Sulfuric or phosphoric acid with an acid strength of more than ninety-nine percent (99.0%) by weight;

(b) Nitric acid with an acid strength of more than seventy percent (70.0%) by weight;

(c) Hydrochloric or hydrofluoric acid with an acid strength of more than thirty percent (30.0%) by weight; or

(d) More than one liquid phase, where the top phase contains more than one percent (1%) VOC by weight;

Y. The following chemical processing equipment or operations:

(I) Storage tanks, reservoirs, pumping, and handling equipment, and mixing and packaging equipment containing or processing soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized; and

(II) Batch loading and unloading of solid phase catalysts;

Z. Body repair and refinishing of motorcycle, passenger car, van, light truck and heavy truck and other vehicle body parts, bodies, and cabs, provided—

(I) Good housekeeping is practiced; spills are cleaned up as soon as possible, equipment is maintained according to manufacturers' instructions, and property is kept clean. In addition, all waste coatings, solvents, and spent automotive fluids including, but not limited to, fuels, engine oil, gear oil, transmission fluid, brake fluid, antifreeze, fresh or waste fuels, and spray booth filters or water wash sludge are disposed of properly. Prior to disposal, all liquid waste shall be stored in covered containers. All solvents and cleaning materials shall be stored in closed containers;

(II) All spray coating operations shall be performed in a totally enclosed filtered spray booth or totally enclosed filtered spray area with an air intake area of less than one hundred (100) square feet. All spray areas shall be equipped with a fan which shall be operated during spraying, and the exhaust air shall either be vented through a stack to the atmosphere or the air shall be recirculated back into the shop through a carbon adsorption system. All carbon adsorption systems shall be properly maintained according to the manufacturer's operating instructions, and the carbon shall be replaced at the manufacturer's recommended intervals to minimize solvent emissions; and

(III) Spray booth, spray area, and preparation area stacks shall be located at least eighty feet (80') away from any residence, recreation area, church, school, child care facility, or medical or dental facility;

AA. Sawmills processing no more than twenty-five (25) million board feet, green lumber tally of wood per year, in which no mechanical drying of lumber is performed, in which fine particle emissions are controlled through the use of properly engineered baghouses or cyclones, and which meet all of the following provisions:

(I) The mill shall be located at least five hundred feet (500') from any recreational area, school, residence, or other structure not occupied or used solely by the owner of the facility or the owner of the property upon which the installation is located;

(II) All sawmill residues (sawdust, shavings, chips, bark) from debarking, planing, saw areas, etc., shall be removed or contained to minimize fugitive particulate emissions. Spillage of wood residues shall be cleaned up as soon as possible and contained such that dust emissions from wind erosion and/or vehicle traffic are minimized. Disposal of collected sawmill residues must be accomplished in a manner that minimizes residues becoming airborne. Disposal by means of burning is prohibited unless it is conducted in a permitted incinerator; and

(III) All open-bodied vehicles transporting sawmill residues (sawdust, shavings, chips, bark) shall be covered with a tarp to achieve maximum control of particulate emissions;

BB. Internal combustion engines and gas turbine driven compressors, electric generator sets, and water pumps, used only for portable or emergency services, provided that the maximum annual operating hours shall not exceed five hundred (500) hours. Emergency generators are exempt only if their sole function is to provide back-up power when electric power from the local utility is interrupted. This exemption only applies if the emergency generators are operated only during emergency situations and for short periods of time to perform maintenance and operational readiness testing. The emergency generator shall be equipped with a non-resettable meter; and

CC. Commercial dry cleaners.

3. At installations, previously issued a permit under 10 CSR 10-6.060, construction or modification are exempt from 10 CSR 10-6.060 if they meet the requirements of subparagraphs (3)(A)3.A. or (3)(A)3.B. of this rule for criteria pollutants, except lead, and subparagraph (3)(A)3.C. for hazardous air pollutants. The director may require review of construction or modifications otherwise exempt under subparagraphs (3)(A)3.A., (3)(A)3.B., or (3)(A)3.C. of this rule if the emissions of the proposed construction or modification will appreciably affect air quality or the air quality standards are appreciably exceeded or complaints involving air pollution have been filed in the vicinity of the proposed construction or modification.

A. For proposed construction or modification located less than five hundred feet (500') from the property boundary, at maximum design capacity the proposed construction or modification shall emit each criteria pollutant at a rate of no more than one-half (0.5) pound per hour. For proposed construction or modification located more than five hundred feet (500') from the property boundary, at a maximum design capacity the proposed construction or modification shall emit no more than 0.91 pound per hour.

B. Actual emissions of each criteria pollutant will be no more than eight hundred seventy-six (876) pounds per year.

C. At maximum design capacity, the proposed construction or modification will emit a hazardous air pollutant at a rate of no more than one-half (0.5) pound per hour, or the hazardous emission threshold as established in subsection (12)(J) of 10 CSR 10-6.060, whichever is less.

Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri

ORDER OF RULEMAKING

By the authority vested in the Missouri Air Conservation Commission under section 643.050, RSMo 2000, the commission adopts a rule as follows:

10 CSR 10-6.062 is adopted.

A notice of proposed rulemaking containing the text of the proposed rule was published in the *Missouri Register* on April 15, 2003 (28 MoReg 731-734). Those sections with changes are reprinted here. This proposed rule becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: The U.S. Environmental Protection Agency (EPA) and Friends of Agriculture for the Reform of Missouri

Environmental Regulations (F.A.R.M.E.R.) provided comments on this rule. The comments were generally supportive of the rulemaking. EPA provided many detailed comments concerning both the general requirements of the rule and specific requirements established in each individual permit-by-rule category. F.A.R.M.E.R. suggested a new permit-by-rule category for livestock markets and livestock operations.

COMMENT: EPA commented that subsection (1)(E) authorizes the director to require additional air quality analysis if it is likely that that proposed construction or modification would appreciably affect air quality or the air quality standards are being appreciably exceeded. This language is based on the statutory language for denial of a permit. However, to ensure protection of the air quality standards, the standard for determining whether to require additional air quality analysis should be lower than the standard for denial of a permit. RESPONSE AND EXPLANATION OF CHANGE: The purpose of this subsection was to provide a backdrop so that if an air quality issue is discovered, either in a company's notification or during a subsequent post-construction review of the project, there is a way to require such an analysis. A phrase was added to subsection (1)(E) that says the permits-by-rule can be revoked based on an air quality analysis as a result of this comment.

COMMENT: EPA commented that the provisions in paragraph (3)(A)1. would allow an operator to begin both construction and operation immediately upon giving notification. This approach would not provide any time for the department to review the submission to determine that the source qualifies, and that the source would not have any adverse air quality impact, prior to construction. EPA recommended that the state revise the rule such that the operator may begin construction a specified number of days after notification, unless the department finds that the project does not qualify for the rule or unless the department finds that additional air quality analysis is required.

RESPONSE AND EXPLANATION OF CHANGE: The conditions placed on each permit-by-rule are generally protective of ambient air. The entire purpose of the permit-by-rule approach is to avoid pre-construction review for those operators willing to accept the generic conditions. A post-construction review of the project would serve the same purpose as a pre-construction review. Should an inspector find that an operator is not abiding by the conditions of the permit-by-rule, the case would be handled in a manner similar to those where the operator is not abiding by their permit conditions or where an operator constructed without first obtaining a construction permit. It does seem prudent, however, to include a provision to revoke a permit-by-rule. New subsection (3)(C) was added to the rule which provides a mechanism to revoke a permit-by-rule as a result of this comment.

COMMENT: EPA commented that in paragraph (3)(A)4. the proposed language assumes that a permit-by-rule will be approved following an on-site compliance review. Yet, the state may find that the operator has not met the terms or agreement necessary to qualify for permit-by-rule. The rule should be changed to reflect that the state will take final agency action, meaning approval or denial, following the on-site review.

RESPONSE AND EXPLANATION OF CHANGE: Language was changed to reflect that the state will take final agency action on the permit-by-rule, as well as clarifying several other minor wording changes throughout the rule as a result of this comment.

COMMENT: EPA commented that the general provisions do not include a requirement for the operator to notify the department if it exceeds the emission cap or other operating limitations specified in the rules. Even if a reporting obligation exists as part of the operat-

ing permit or by other rules, it would be helpful to include a specific requirement in this rule to make sure that operators meet their compliance obligations.

RESPONSE AND EXPLANATION OF CHANGE: This requirement has been added to section (4) as a result of this comment.

COMMENT: EPA commented that the printing permit-by-rule in paragraph (3)(B)1. limits printing operations to annual Volatile Organic Compounds (VOC) emission to less than forty (40) tons per year rolling average. Instead of specifying an annual average period, EPA recommended a twelve (12)-month period, rolled monthly. The same issue exists in the proposed language in paragraph (3)(B)3. for surface coating operations.

RESPONSE AND EXPLANATION OF CHANGE: These changes have been made as a result of this comment.

COMMENT: EPA commented that the rule language is lacking procedures for calculating emissions for the printing operations permit-by-rule. This is also true for the surface coating permit-by-rule. There is a requirement that a mass balance accounting be used, but the burden rests solely with the operator to perform this calculation. The rule should include a detailed text description, including examples, to detail how VOC and Hazardous Air Pollutant (HAP) emissions are accounted for. The procedures should certainly be included as examples in the application kit prepared by the department and made available to applications.

RESPONSE: Including detailed calculations would make the rule unduly complicated and difficult to follow. The intent is to develop a very specific permit-by-rule package for each industry category detailing and specifying how the calculations are to be made. These packages will likely contain guidance on other air issues common to each category, such as listing other rules that would likely apply to the source. 10 CSR 10-6.110 Submission of Emission Data, Emission Fees and Process Information requires many sources to calculate and report emissions, so the mechanism for doing this is established. No changes were made to the rule as a result of this comment.

COMMENT: EPA commented that subparagraph (3)(B)2.E. should be revised to say that the secondary chamber of the incinerator should not only be designed to maintain a temperature of one thousand six hundred degrees Fahrenheit (1,600°F), but also operated at that temperature.

RESPONSE: Subparagraph (3)(B)2.D. requires the burners to be operated such that the minimum temperature is maintained. No changes were made to the rule as a result of this comment.

COMMENT: EPA commented that the crematories and animal incinerator permit-by-rule requires a ten percent opacity limit at all times. It seems reasonable to include a condition in the permit-by-rule that requires the owner or operator to periodically conduct a visible assessment of emissions from the stack and record the results for later review by inspectors.

RESPONSE: For many industries periodic record keeping would be easily justified. Operators of small crematories and animal incinerators generally do not have the training or skills to read opacity. In addition, due to the nature of the waste they are disposing, they are very sensitive to heavy smoke plumes. Staff considered requiring periodic self-monitoring, but concluded that this would not be necessary but instead become a burden that would not prove worthwhile. No changes were made to the rule as a result of this comment.

COMMENT: EPA commented that in addition to any ambient concentration-based HAP threshold specified in part (3)(B)3.D.(III), the permit-by-rule should protect against emissions of any single HAP in excess of ten (10) tons per year (twelve (12) months, rolled month-

ly). Above this threshold the source may be subject to the 112(g) requirements; implemented through 10 CSR 10-6.060(9).

RESPONSE AND EXPLANATION OF CHANGE: The threshold levels referenced in part (3)(B)3.D.(III) are not concentration-based but emission rate based. In fact, most of these rates are from the proposed 112(g) rates as originally proposed by EPA. The language was changed, however, to clarify that the limits are to cover any twelve (12)-month period, rolled monthly.

COMMENT: EPA commented that the printing permit-by-rule is limited only to areas in attainment with the National Ambient Air Quality Standards (NAAQS). The surface coating permit-by-rule should contain a similar restriction.

RESPONSE AND EXPLANATION OF CHANGE: As a result of this comment, subparagraph (3)(B)3.H. has been added to limit the permit-by-rule to attainment areas.

COMMENT: EPA commented that the surface coating permit-by-rule contains a number of performance criteria on spray booths to minimize emission of particulate matter. The technical support document provided with the request to incorporate this rule into the State Implementation Plan (SIP) should include comprehensive modeling showing that the set-back distances in the rule are protective of the PM₁₀ NAAQS under the most conservative circumstances. This analysis will be reviewed when determining SIP approvability.

RESPONSE: The department's Air Pollution Control Program intends to provide the requested technical demonstration. No changes were made to the rule as a result of this comment.

COMMENT: F.A.R.M.E.R. provided detailed comments on the regulatory background for livestock exemptions. In order to resolve ongoing litigation related to livestock exemptions, F.A.R.M.E.R. recommended exemption clarification language for the operating permit rule and permit-by-rule language for new livestock operations.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program is clarifying the livestock exemption language in the operating permit rule and has added a livestock markets and operations permit-by-rule category with new paragraph (3)(B)4.

10 CSR 10-6.062 Construction Permits By Rule

(1) Applicability. This rule shall apply to certain types of facilities or changes within facilities listed in this rule where construction is commenced on or after the effective date of the relevant permit-by-rule. To qualify for a permit-by-rule, the following general requirements must be met:

(E) The director may require an air quality analysis in addition to the general requirements listed in subsection (3)(B) of this rule if it is likely that the emissions of the proposed construction or modification will appreciably affect air quality or the air quality standards are being appreciably exceeded or complaints filed in the vicinity of the proposed construction or modification warrant an air quality analysis. The permit-by-rule may be revoked if it is determined that emissions from the source interfere with the attainment or maintenance of ambient air quality standards.

(3) General Provisions.

(A) Registration. To qualify for a permit-by-rule, the owner or operator must notify the Missouri Department of Natural Resources' Air Pollution Control Program prior to commencement of construction. This notification will establish the permit-by-rule and become the conditions under which the facility is permitted. All representations made in the notification regarding construction plans, operating procedures, and maximum emission rates shall become conditions upon which the facility shall construct or modify. If the conditions,

as represented in the notification, vary in a manner that will change the method of emission controls, the character of the emissions, or will result in an increase of emissions, a new notification or permit application must be prepared and submitted to the department's Air Pollution Control Program.

1. The director shall provide a form by which operators can submit their notifications. The notification shall include documentation of the basis of emission estimates or activity rates and be signed by a responsible official certifying that the information contained in the notification is true, accurate, and complete. The expected first date of operation shall be included in the notification. Upon notification, the operator may begin construction and operation of the new source.

2. The notification shall be sent to the department's Air Pollution Control Program. Two (2) copies of the original notification shall be made. One (1) shall be sent to the appropriate regional office, and one (1) shall be maintained on-site and be provided immediately upon request by inspectors.

3. Fees. A review fee of seven hundred dollars (\$700) shall accompany the notification sent to the department's Air Pollution Control Program.

4. Upon completion of an initial on-site compliance review, the permit-by-rule notification shall be approved.

(B) Permit-by-Rule.

1. Printing operations. Any printing operation (including, but not limited to, screen printers, ink-jet printers, presses using electron beam or ultraviolet light curing, and labeling operations) and supporting equipment (including, but not limited to, corona treaters, curing lamps, preparation, and cleaning equipment) which operate in compliance with the following conditions is permitted under this rule:

A. The uncontrolled emission of volatile organic compounds (VOCs) from inks and solvents (including, but not limited to, those used for printing, cleanup, or makeup) shall not exceed forty (40) tons per twelve (12)-month period, rolled monthly, for all printing operations on the property. The emissions shall be calculated using a material balance that assumes that all of the VOCs in the inks and solvents used are directly emitted to the atmosphere;

B. The uncontrolled emission of hazardous air pollutants shall not exceed ten (10) tons per twelve (12)-month period, rolled monthly, for all printing operations on the property. The emissions shall be calculated using a material balance that assumes that all hazardous air pollutants used are directly emitted to the atmosphere;

C. Copying and duplicating equipment employing the xerographic method are exempt from subparagraphs (3)(B)1.D.–G. of this rule;

D. Printing presses covered by this section shall not utilize heat set, thermo set, or oven-dried inks. Heated air may be used to shorten drying time, provided the temperature does not exceed one hundred ninety-four degrees Fahrenheit (194°F);

E. Screen printing operations requiring temperatures greater than one hundred ninety-four degrees Fahrenheit (194°F) to set the ink are exempt from subparagraph (3)(B)1.D. of this rule;

F. The facility shall not be located in an ozone nonattainment area; and

G. Record keeping. The operator shall maintain records of ink and solvent usage and shall be kept in sufficient detail to show compliance with subparagraphs (3)(B)1.A. and 1.B. of this rule.

2. Crematories and animal incinerators. Any crematory or animal incinerator that is used solely for the cremation of human remains, disposal of human pathological wastes, or animal carcasses and operates in compliance with the following conditions is permitted under this rule:

A. The materials to be disposed of shall be limited to non-infectious human materials removed during surgery, labor and delivery, autopsy, or biopsy including body parts, tissues and fetuses, organs, bulk blood and body fluids, blood or tissue laboratory specimens;

and other noninfectious anatomical remains or animal carcasses in whole or in part. The owner or operator shall minimize the amount of packaging fed to the incinerator, particularly plastic containing chlorine. The incinerators shall not be used to dispose of other non-biological medical wastes including, but not limited to, sharps, rubber gloves, intravenous bags, tubing, and metal parts;

B. The manufacturer's rated capacity (burn rate) shall be two hundred (200) pounds per hour or less;

C. The incinerator shall be a dual-chamber design;

D. Burners shall be located in each chamber, sized to manufacturer's specifications, and operated as necessary to maintain the minimum temperature requirements of subparagraph (3)(B)2.E. of this rule at all times when the unit is burning waste;

E. Excluding crematories, the secondary chamber must be designed to maintain a temperature of one thousand six hundred degrees Fahrenheit (1,600°F) or more with a gas residence time of one-half (1/2) second or more. The temperature shall be monitored with equipment that is accurate to plus or minus two percent ($\pm 2\%$) and continuously recorded. The thermocouples or radiation pyrometers shall be fitted to the incinerator and wired into a manual reset noise alarm such that if the temperature in either of the two (2) chambers falls below the minimum temperature above, the alarm will sound at which time plant personnel shall take immediate measures to either correct the problem or cease operation of the incinerator until the problem is corrected;

F. There shall be no obstructions to stack flow, such as by rain caps, unless such devices are designed to automatically open when the incinerator is operated. Properly installed and maintained spark arresters are not considered obstructions;

G. Each incinerator operator shall be trained in the incinerator operating procedures as developed by the American Society of Mechanical Engineers (ASME), by the incinerator manufacturer, or by a trained individual with more than one (1) year experience in the operation of the incinerator that the trainee will be operating. Minimum training shall include basic combustion control parameters of the incinerator and all emergency procedures to be followed should the incinerator malfunction or exceed operating parameters. An operator who meets the training requirements of this condition shall be on duty and immediately accessible during all periods of incinerator operation. The manufacturer's operating instructions and guidelines shall be posted at the unit and the unit shall be operated in accordance with these instructions;

H. The incinerator shall have an opacity of less than ten percent (10%) at all times;

I. Heat shall be provided by the combustion of natural gas, liquid petroleum gas, or Number 2 fuel oil with less than three-tenths percent (0.3%) sulfur by weight, or by electric power; and

J. Record keeping. The operator shall maintain a log of all alarm trips and the resultant action taken. A written certification of the appropriate training received by the operator, with the date of training, that includes a list of the instructor's qualifications or ASME certification school shall be maintained for each operator. The operator shall maintain an accurate record of the monthly amount and type of waste combusted.

3. Surface coating. Any surface coating activity or stripping facility that operates in compliance with the following conditions is permitted under this rule:

A. Metalizing, spraying molten metal onto a surface to form a coating, is not permitted under this permit-by-rule. The use of coatings that contain metallic pigments is permitted;

B. All facilities shall implement good housekeeping procedures to minimize fugitive emissions, including:

(I) All spills shall be cleaned up immediately;

(II) The booth or work area exhaust fans shall be operating when cleaning spray guns and other equipment; and

(III) All new and used coatings and solvents shall be stored in closed containers. All waste coatings and solvents shall be removed from the site by an authorized disposal service or disposed of at a permitted on-site waste management facility;

C. Drying and curing ovens shall either be electric or meet the following conditions:

(I) The maximum heat input to any oven must not exceed forty (40) million British thermal units (Btus) per hour; and

(II) Heat shall be provided by the combustion of one of the following: natural gas; liquid petroleum gas; fuel gas containing no more than twenty (20.0) grains of total sulfur compounds (calculated as sulfur) per one hundred (100) dry standard cubic feet; or Number 2 fuel oil with not more than three-tenths percent (0.3%) sulfur by weight;

D. Emissions shall be calculated using a material balance that assumes that all VOCs and hazardous air pollutants in the paints and solvents used are directly emitted to the atmosphere. The total uncontrolled emissions from the coating materials (as applied) and cleanup solvents shall not exceed the following for all operations:

(I) Forty (40) tons per twelve (12)-month period, rolled monthly, of VOCs for all surface coating operations on the property;

(II) A sum of twenty-five (25) tons per twelve (12)-month period, rolled monthly, of all hazardous air pollutants for all surface coating operations on the property; and

(III) Each individual hazardous air pollutant shall not exceed the emission threshold levels established in 10 CSR 10-6.060(12)(J), rolled monthly;

E. The surface coating operations shall be performed indoors, in a booth, or in an enclosed work area. The booth shall be designed to meet a minimum face velocity at the intake opening of each booth or work area of one hundred feet (100') per minute. Emissions shall be exhausted through elevated stacks that extend at least one and one-half (1 1/2) times the building height above ground level. All stacks shall discharge vertically. There shall be no obstructions to stack flow, such as rain caps, unless such services are designed to automatically open when booths are operated;

F. For spraying operations, emissions of particulate matter must be controlled using either a water wash system or a dry filter system with a ninety-five percent (95%) removal efficiency as documented by the manufacturer. The face velocity at the filter shall not exceed two hundred fifty feet (250') per minute or that specified by the filter manufacturer, whichever is less. Filters shall be replaced according to the manufacturer's schedule or whenever the pressure drop across the filter no longer meets the manufacturer's recommendation;

G. Coating operations shall be conducted at least fifty feet (50') from the property line and at least two hundred fifty feet (250') from any recreational area, residence, or other structure not occupied or used solely by the owner or operator of the facility or the owner of the property upon which the facility is located;

H. The facility shall not be located in an ozone nonattainment area; and

I. Record keeping. The operator shall maintain the following records and reports:

(I) All material safety data sheets for all coating materials and solvents;

(II) A monthly report indicating the days the surface coating operation was in operation and the total tons emitted during the month, and the calculation showing compliance with the rolling average emission limits of subparagraph (3)(B)3.D. of this rule;

(III) A set of example calculations showing the method of data reduction including units, conversion factors, assumptions, and the basis of the assumptions; and

(IV) These reports and records shall be immediately available for inspection at the installation.

4. Livestock markets and livestock operations. Any livestock market or livestock operation including animal feeding operations and concentrated animal feeding operations as those terms are defined by 40 CFR 122.23, that was constructed after November 30, 2003, and operates in compliance with the following conditions is permitted under this rule. In addition, any manure storage and application system directly associated with the livestock markets or livestock operations such that these manure storage and application systems are operated in compliance with the following conditions are also permitted under this rule:

A. All facilities shall implement the following building cleanliness and ventilation practices:

(I) Buildings shall be cleaned thoroughly between groups of animals;

(II) Manure and spilled feed shall be scraped from aisles on a regular basis, at least once per week;

(III) Ventilation fans, louvers, and cowlings shall be regularly cleaned to prevent excessive buildup of dust, dirt, or other debris that impairs performance of the ventilation system;

(IV) Air inlets shall be cleaned regularly to prevent excessive buildup of dust, dirt, or other debris that reduces airflow through the inlets;

(V) Ceiling air inlets shall be adjusted to provide adequate airflow (based on design ventilation rates) to the building interior;

(VI) For high-rise structures, the manure storage area must include engineered natural or mechanical ventilation. This ventilation must be maintained and cleaned regularly to prevent excessive buildup of dust, dirt, or other debris that impairs performance of the ventilation system;

(VII) For deep-bedded structures, bedding and/or litter used in the animal living area must be maintained in a reasonably clean condition. Indications that the bedding is not reasonably clean include extensive caking, manure coating animals or birds, and the inability to distinguish bedding material from manure. Bedding or litter with excessive manure shall be removed and replaced with clean bedding or litter; and

(VIII) For automatic feed delivery systems, feed lines shall have drop tubes that extend into the feeder to minimize dust generation;

B. All facilities shall implement the following manure storage practices:

(I) Buildings with flush alleys, scrapers, or manure belts shall be operated to remove manure on a regular schedule, at least daily;

(II) Buildings with shallow pits, four feet (4') deep or less, shall be emptied on a regular schedule, at least once every fourteen (14) days;

(III) Feed, other than small amounts spilled by the animals, shall not be disposed of in the manure storage system;

(IV) All lagoons shall be regularly monitored for solids buildup, at least once every five (5) years. Lagoon sludge shall be removed and properly disposed of when the sludge volume equals the designed sludge volume; and

(V) Manure compost piles or windrows shall be turned or otherwise mixed regularly so that the temperature within the pile or windrow is maintained between one hundred five degrees Fahrenheit (105°F) and one hundred fifty degrees Fahrenheit (150°F);

C. The operator shall consider wind direction and velocity when conducting surface land application, and manure shall not be applied within five hundred feet (500') from a downwind inhabited residence;

D. Dead animals shall not be disposed of in the manure storage system unless the system is specifically designed and managed to allow composting of dead animals. Dead animals shall be removed from buildings daily; and

E. Record keeping. (*Not Applicable*)

(C) Revocation.

1. A permit-by-rule may be revoked upon request of the operator or for cause. For purposes of this paragraph, cause for revocation exists if—

(I) There is a pattern of unresolved and repeated noncompliance with the conditions of the permit-by-rule and the operator has refused to take appropriate action (such as a schedule of compliance) to resolve the noncompliance;

(II) The operator has failed to pay a civil or criminal penalty imposed for violations of the permit-by-rule; or

(III) It is determined through a technical analysis that emissions from the source interfere with the attainment or maintenance of ambient air quality standards.

2. Upon revocation of a permit-by-rule the operator shall obtain a permit, undergoing review under 10 CSR 10-6.060.

(4) Reporting and Record Keeping. In addition to the original notification required by paragraph (3)(A)2. of this rule, operators shall maintain records containing sufficient information to demonstrate compliance with all applicable permit-by-rule requirements as specified in subsection (3)(B) of this rule. These records shall be maintained at the installation for a minimum of five (5) years, and shall be made immediately available to inspectors upon their request. Operators shall also report to the Air Pollution Control Program, no later than ten (10) days after the end of the month during which the operation exceeded any of the permit-by-rule conditions.

Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri

ORDER OF RULEMAKING

By the authority vested in the Missouri Air Conservation Commission under section 643.050, RSMo 2000, the commission amends a rule as follows:

10 CSR 10-6.065 is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on April 15, 2003 (28 MoReg 734–735). Those sections with changes are reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: Comments were received from the Associated General Contractors of Missouri, the Missouri Limestone Producers, the Friends of Agriculture for the Reform of Missouri Environmental Regulations (F.A.R.M.E.R.), and Ameren Services. The comments were supportive of the proposed amendment and were aimed at adding or correcting specific exemptions.

COMMENT: The Associated General Contractors of Missouri supports the exemption of portable equipment installations from operating permits.

RESPONSE: The department's Air Pollution Control Program appreciates this support. No change has been made as a result of this comment.

COMMENT: The Missouri Limestone Producers Association supports the exemption in paragraph (3)(C)20., but suggests that the term rock quarry be replaced with rock crushing plant.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program appreciates this support and has made this change as a result of this comment.

COMMENT: F.A.R.M.E.R. provided detailed comments on the regulatory background for livestock exemptions. In order to resolve ongoing litigation related to livestock exemptions, F.A.R.M.E.R. recommended exemption clarification language for the operating permit rule and permit-by-rule language for new livestock operations.

RESPONSE AND EXPLANATION OF CHANGE: The department's Air Pollution Control Program is adding a livestock markets and operations permit-by-rule category to the new rule for permits-by-rule and has clarified the livestock exemption language in paragraph (3)(C)6.

COMMENT: Ameren Services commented on paragraph (3)(C)9. noting that the exemption for control equipment which eliminates all emissions is unrealistic. If the intention was to reference a high efficiency control device, a control efficiency should be specified.

RESPONSE: The origin of this exemption resulted from a review of exemptions given in other states, and this exemption was an obvious example of an activity that would not require an operating permit. It was not intended to exempt high efficiency control equipment, but activities such as totally enclosed processes that have no actual emissions. No changes were made to the rule as a result of this comment.

10 CSR 10-6.065 Operating Permits

(3) Applicability.

(C) Exempt Installations and Emission Units. The following installations and emission units are exempt from the requirements of this rule unless such units are part 70 or intermediate installations or are located at part 70 or intermediate installations. Emissions from exempt installations and emission units shall be considered when determining if the installation is a part 70 or intermediate installation:

1. Any installation that would be required to obtain a permit solely because it is subject to 10 CSR 10-6.070(7)(AAA) Standards of Performance for New Residential Wood Heaters;
2. Any installation that would be required to obtain a permit solely because it is subject to 10 CSR 10-6.240 or 10 CSR 10-6.250;
3. Single or multiple family dwelling units for not more than three (3) families;
4. Comfort air conditioning or comfort ventilating systems not designed or used to remove air contaminants generated by, or released from, specific units of equipment;
5. Equipment used for any mode of transportation;
6. Livestock markets and livestock operations, including animal feeding operations and concentrated animal feeding operations as those terms are defined by 40 CFR 122.23 and all manure storage and application systems associated with livestock markets or livestock operations;
7. Restaurants and other retail establishments for the purpose of preparing food for employee and guest consumption;
8. Fugitive dust controls unless a control efficiency can be assigned to the equipment or control equipment;
9. Equipment or control equipment which eliminates all emissions to the ambient air;
10. Equipment, including air pollution control equipment, but not including an anaerobic lagoon, that emits odors but no regulated air pollutants;
11. Residential wood heaters, cookstoves or fireplaces;
12. Laboratory equipment used exclusively for chemical and physical analysis or experimentation is exempt, except equipment used for controlling radioactive air contaminants;
13. Recreational fireplaces;

14. Stacks or vents to prevent the escape of sewer gases through plumbing traps for systems handling domestic sewage only. Systems which include any industrial waste do not qualify for this exemption;

15. Combustion equipment that—

A. Emits only combustion products;

B. Produces less than one hundred fifty (150) pounds per day of any air contaminant; and

C. Has a maximum rated capacity of—

(I) Less than ten (10) million British thermal units (Btus) per hour heat input by using exclusively natural or liquefied petroleum gas, or any combination of these; or

(II) Less than one (1) million Btus per hour heat input;

16. Office and commercial buildings, where emissions result solely from space heaters using natural gas or liquefied petroleum gas with a maximum rated capacity of less than twenty (20) million Btus per hour heat input. Incinerators operated in conjunction with these sources are not exempt;

17. Any country grain elevator that never handles more than one million two hundred thirty-eight thousand six hundred fifty-seven (1,238,657) bushels of grain during any twelve (12)-month period and is not located within an incorporated area with a population of fifty thousand (50,000) or more. A country grain elevator is defined as a grain elevator that receives more than fifty percent (50%) of its grain from producers in the immediate vicinity during the harvest season. This exemption does not include grain terminals which are defined as grain elevators that receive grain primarily from other grain elevators. To qualify for this exemption the owner or operator of the facility shall retain monthly records of grain origin and bushels of grain received, processed and stored for a minimum of five (5) years to verify the exemption requirements. Monthly records must be tabulated within seven (7) days of the end of the month. Tabulated monthly records shall be made available immediately to Missouri Department of Natural Resources representatives for an announced inspection or within three (3) hours for an unannounced visit;

18. Sand and gravel operations that have a maximum capacity to produce less than seventeen and one-half (17.5) tons of product per hour and use only natural gas as fuel when drying;

19. Noncommercial incineration of dead animals, the on-site incineration of resident animals for which no consideration is received or commercial profit is realized, as authorized in section 269.020.6, RSMo 2000; and

20. Any asphaltic concrete plant, concrete batching plant or rock crushing plant that can be classified as a portable equipment installation, as defined in 10 CSR 10-6.020.

Program
Chapter 13—Peace Officer Licenses**

ORDER OF RULEMAKING

By the authority vested in the director of the Department of Public Safety under sections 590.020.2, 590.030.6 and 590.040.2, RSMo Supp. 2002, the director amends a rule as follows:

11 CSR 75-13.010 Classification of Peace Officer Licenses is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on June 2, 2003 (28 MoReg 1043). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amend-

ment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

**Title 11—DEPARTMENT OF PUBLIC SAFETY
Division 75—Peace Officer Standards and Training
Program
Chapter 14—Basic Training Centers**

ORDER OF RULEMAKING

By the authority vested in the director of the Department of Public Safety under section 590.030.1, RSMo Supp. 2002, the director amends a rule as follows:

11 CSR 75-14.030 Standard Basic Training Curricula and Objectives is amended.

A notice of proposed rulemaking containing text of the proposed amendment was published in the *Missouri Register* on June 2, 2003 (28 MoReg 1043). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

**Title 11—DEPARTMENT OF PUBLIC SAFETY
Division 75—Peace Officer Standards and Training
Program
Chapter 14—Basic Training Centers**

ORDER OF RULEMAKING

By the authority vested in the director of the Department of Public Safety under section 590.060.1, RSMo Supp. 2002, the director amends a rule as follows:

11 CSR 75-14.080 Minimum Requirements for a Basic Training Instructor is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on June 2, 2003 (28 MoReg 1044). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

**Title 12—DEPARTMENT OF REVENUE
Division 10—Director of Revenue
Chapter 110—Sales/Use Tax—Exemptions**

ORDER OF RULEMAKING

By the authority vested in the director of revenue under sections 144.270 and 144.705, RSMo 2000, the director withdraws a rule as follows:

12 CSR 10-110.900 Farm Machinery and Equipment Exemptions is withdrawn.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on May 1, 2003 (28 MoReg 881-885). This proposed amendment is withdrawn.

SUMMARY OF COMMENTS: No comments were received. Due to the enactment of House Bill 600 the proposed amendment is no longer appropriate. The department is withdrawing this proposed amendment.

Title 12—DEPARTMENT OF REVENUE
Division 10—Director of Revenue
Chapter 111—Sales/Use Tax—Machinery and Equipment Exemptions

ORDER OF RULEMAKING

By the authority vested in the director of revenue under section 144.270, RSMo 2000, the director amends a rule as follows:

12 CSR 10-111.010 Manufacturing Machinery and Equipment Exemptions is withdrawn.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on May 1, 2003 (28 MoReg 886-889). This proposed amendment is withdrawn.

SUMMARY OF COMMENTS: This proposed amendment is being withdrawn in order to revise the fiscal impact statement and consider comments received during the hearing before the Joint Committee on Administrative Rules.

The department received seven (7) comments on its proposed amendment, 12 CSR 10-111.010.

COMMENT: Three (3) comments suggested that the definitions of “materials” (12 CSR 10-111.010(2)(G)) and “supplies” (12 CSR 10-111.010(2)(L)) were too narrow and contained concepts not contained in the express terms of the statute. The commenters expressed the belief that tools should be encompassed within the definition of “materials” or “supplies.”

RESPONSE: In *Lincoln Industrial, Inc. v. Director of Revenue*, 51 S.W.3d 462 (Mo. banc 2001), the Supreme Court made clear that each word used in the statute must be given its own meaning based on the plain meaning of the words of the statute. *See id.* at 463. The words “materials” and “supplies” must each be given their plain meaning in the context of a statute that exempts not only “materials and supplies,” but also “machinery,” “equipment” and “parts.” The definitions proposed are based on dictionary definitions modified in light of this statutory context, standard accounting practices and common usage of these terms. The comments are correct that the statute does not expressly define these terms, but that does not make them meaningless. The department has interpreted these terms consistently with prior Supreme Court guidance.

It should be noted that tools purchased solely to install or construct machinery, equipment or parts could qualify as supplies in appropriate circumstances. Under the express terms of the statute, sole use is a requirement for claiming the exemption. Section 144.030.2(4), RSMo. If tools were purchased to install or construct machinery and used only for that purpose, the department considers such tools to be supplies. Because it is uncommon that tools would be purchased solely for such purposes, however, the department does not believe

this would have a significant impact on taxpayers even if tools never qualified.

COMMENT: Two (2) commenters noted that the definition of “supplies” expressly excludes fuel, which the commenter believes should be included as a supply.

RESPONSE: The department believes the term “supplies” does not include fuel in the plain meaning of the language used in the statute and as defined in the regulation. The regulation expressly excludes fuel from the definition to avoid any misunderstanding on this point. Prior to the proposed amendment, a number of taxpayers presented this question, so the department believes this express reference is helpful in setting forth the department’s interpretation.

Generally, when the legislature has sought to exempt fuel from sales tax, it has done so expressly. *See, e.g.,* section 144.030.2(1) and (22). An exemption for fuel under this section would cost the state millions of dollars annually. Surely, if the legislature intended to enact such a large exemption, it would have done so expressly, as it has elsewhere, rather than through use of a generic term like “supplies.” Therefore, the department will retain the definition as proposed.

COMMENT: Four (4) comments suggested removing the language in 12 CSR 10-111.010(2)(K) stating that an item must be *substantially* used in manufacturing to qualify for the exemption because substantial use is not expressly mentioned in the statute. One (1) commenter suggested that “substantially” be defined.

RESPONSE: The Supreme Court in *DST Systems, Inc. v. Director of Revenue*, 43 S.W.3d 799 (Mo. banc 2001), relied on the substantial manufacturing use of the machinery or equipment in allowing this exemption. Therefore, the department believes this is a correct statement of the law.

COMMENT: Four (4) comments stated that the regulation provisions allowing an exemption for the percentage of use for a manufacturing purpose and disallowing the exemption for non-manufacturing uses was not supported by statute. *See* 12 CSR 10-111.010(3)(E) and examples.

RESPONSE: Traditionally, the department has viewed the manufacturing exemptions as an all or nothing proposition. In a traditional, i.e., non-computerized, manufacturing environment, this approach made sense. Machinery and equipment purchased for use on a production line was seldom if ever used for non-manufacturing purposes. However, computers have changed the environment.

An actual Supreme Court case best illustrates the issue. In *DST*, the taxpayer printed information distributed to its customers. It collected approximately three (3) million dollars in total tax on the sale of this printed information over a period of ten (10) years. During this period, it purchased a massive computer system and paid more than ten (10) million dollars in tax on that purchase. Approximately fifteen–twenty percent (15–20%) of the capacity of this computer system was used for printing the information. The remaining eighty–eighty-five percent (80–85%) was used for non-exempt purposes. The taxpayer claimed the entire purchase was exempt and sought a refund. The department, following its traditional all or nothing approach, argued that none of the purchase was exempt.

The Supreme Court found in favor of the taxpayer, which required the state to refund the entire ten (10) million dollars plus in tax paid, plus interest. Had the department argued the percentage allocation set forth in this regulation and prevailed, the refund would have only been approximately one and one-half to two (1.5–2.0) million dollars. Because the prior regulation did not expressly state that the department would apply a percentage allocation, however, the department felt it could not make that argument.

Significantly, the Supreme Court noted that the regulation did contain a percentage allocation in very limited circumstances. The Court

declined to consider that argument in the context of *DST*, however, because the regulation was not in effect at the times at issue in that case and was not raised by the parties. The Court stated, however: "The statute . . . does not seem to preclude an apportionment scheme." 43 S.W.3d at 804 n.5.

In light of the Supreme Court's statement that the statute appears not to preclude apportionment, the department believes that its fiduciary obligation to all taxpayers of this state requires the department to promulgate a regulation that allows the Supreme Court to determine this issue. The manufacturing exemption has been a part of this statute since long before computers became so prevalent. Only the Supreme Court, or the legislature through subsequent enactment, can determine whether the plain meaning of the statute allows a taxpayer to claim a one hundred percent (100%) deduction, amounting to additional millions in refunds, even when the computer equipment is used less than twenty percent (20%) for exempt manufacturing activity.

COMMENT: Two (2) commenters suggested that 12 CSR 10-111.010(3)(F) incorrectly required that entities claiming an exemption under the integrated plant doctrine have common ownership.

RESPONSE: The Supreme Court in *Utilicorp United, Inc. v. Director of Revenue*, 75 S.W.3d 725 (Mo. banc 2002), specifically precluded an entity under different ownership from claiming the advantage of the integrated plant doctrine. *Id.* at 729. The Court has never extended the doctrine to entities under different ownership. Because the Court created the integrated plant doctrine even though the concept is not contained in the statute, it presumably may limit the doctrine it created. Therefore, the department believes this is a correct statement of applicable law.

COMMENT: One (1) commenter objects that 12 CSR 10-111.010(4)(J) requires a taxpayer actually remit tax in another state in order to be considered to be "subject to tax" in that state.

RESPONSE: The manufacturing machinery and equipment exemptions found in section 144.030.2(4) and (5), RSMo, both require that the machinery or equipment be used directly in manufacturing a "product which is intended to be sold ultimately for final use or consumption." This phrase is defined in section 144.010.1(14) to mean property or services "subject to state or local sales or use taxes . . . in this state or any other state."

A seller may provide a service that would be subject to tax in another state if the seller made taxable sales in that state, but may never make taxable sales in that state. The commenter argues that the legislature intended the manufacturer to qualify for the exemption even if no taxable sales were ever made in that state. This is contrary to the plain meaning of the word "is."

The legislature did not use the phrase "may be (or might be) subject to tax". Instead, the word "is" clearly indicates that the service or product is, at the time of the sale, in fact subject to tax. Actual payment of tax is the only sure test of whether such sales satisfy the legislative requirement. The plain meaning of the common verb "is" should not be obscured by arguments made by clever lawyers.

Title 16—RETIREMENT SYSTEMS
Division 50—The County Employees' Retirement Fund
Chapter 2—Membership and Benefits

ORDER OF RULEMAKING

By the authority vested in the County Employees' Retirement Board under sections 50.1000, RSMo Supp. 2002 and 50.1210-50.1260, RSMo 2000 and Supp. 2002, the board amends a rule as follows:

16 CSR 50-2.035 Payment of Benefits is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on June 2, 2003 (28 MoReg 1047). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

Title 16—RETIREMENT SYSTEMS
Division 50—The County Employees' Retirement Fund
Chapter 2—Membership and Benefits

ORDER OF RULEMAKING

By the authority vested in the County Employees' Retirement Board under sections 50.1000, RSMo Supp. 2002, and 50.1210-50.1260, RSMo 2000 and Supp. 2002, the board amends a rule as follows:

16 CSR 50-2.090 Normal Retirement Benefit is amended.

A notice of proposed rulemaking containing the text of the proposed amendment was published in the *Missouri Register* on June 2, 2003 (28 MoReg 1047). No changes have been made in the text of the proposed amendment, so it is not reprinted here. This proposed amendment becomes effective thirty (30) days after publication in the *Code of State Regulations*.

SUMMARY OF COMMENTS: No comments were received.

This section may contain notice of hearings, correction notices, public information notices, rule action notices, statements of actual costs and other items required to be published in the *Missouri Register* by law.

Title 10—DEPARTMENT OF NATURAL RESOURCES
Division 10—Air Conservation Commission
Chapter 6—Air Quality Standards, Definitions,
Sampling and Reference Methods and Air Pollution
Control Regulations for the Entire State of Missouri

IN ADDITION

In an order of rulemaking published in the *Missouri Register* on January 16, 2002 (27 MoReg 177-183) changes were made to the text of the rule that changed a citation in 10 CSR 10-6.050(4)(A) from “subsection (3)(D)” to “paragraph (3)(C)2.” This section was published in the *Code of State Regulations*, so we are now correcting this in the September 30, 2003 *Code* update to read:

10 CSR 10-6.050 Start-Up, Shutdown and Malfunction Conditions

(4) Reporting and Record Keeping.

(A) The information specified in *[subsection .(C)]* **paragraph (3)(C)2.** shall be submitted to the director not later than fifteen (15) days after receipt of the notice of excess emissions. Information regarding the type and amount of emissions and time of the episode shall be recorded and kept on file. This data shall be included in emissions reported on any required Emissions Inventory Questionnaire.

The Secretary of State is required by sections 347.141 and 359.481, RSMo 2000 to publish dissolutions of limited liability companies and limited partnerships. The content requirements for the one-time publishing of these notices are prescribed by statute. This listing is published pursuant to these statutes. We request that documents submitted for publication in this section be submitted in camera ready 8 1/2" x 11" manuscript.

NOTICE OF DISSOLUTION OF LIMITED LIABILITY COMPANY

NOTICE OF WINDING UP TO ALL CREDITORS AND CLAIMANTS AGAINST SENATE SQUARE 1999, L.L.C.

On August 7, 2003, Senate Square 1999, L.L.C., a Missouri Limited Liability Company (hereinafter "the Company"), filed its Notice of Winding Up with the Missouri Secretary of State, effective as of the date of filing by the Secretary of State.

The Company requests that all persons and organizations with claims against it present them immediately, by letter, to the attention of: Herbert J. Baumann, CPM, Baumann Properties Company, Inc., 217 Clarkson Executive Park, St. Louis, Missouri 63011. Each claim must include the following information:

1. Name, address and telephone number of the claimant.
2. The amount of the claim.
3. The date the claim arose.
4. The basis for the claim.
5. Documentation in support of the claim.

Pursuant to Section 347.141(3) R.S.Mo., all claims against the Company will be barred unless a proceeding to enforce the claim is commenced within three years after the publication of this notice.

NOTICE OF DISSOLUTION TO ALL CREDITORS OF
AND CLAIMANTS AGAINST
H. J. TYRRELL COMPANY, INC.

On July 31, 2003, H. J. Tyrrell Company, Inc., a Missouri corporation (the "Corporation") agreed to dissolve and wind up the Corporation.

The Corporation requests that all persons and organizations who have claims against it present those claims immediately by letter to Richard A. Yawitz at Gallop, Johnson & Neuman, L.C., 101 South Hanley, Suite 1600, St. Louis, Missouri 63105. All claims must include the name and address of the claimant, the amount claimed, the basis for the claim, the date(s) on which the event(s) on which the claim is based occurred, whether the claim was secured, and, if so, the collateral used as security.

NOTE: BECAUSE OF THE DISSOLUTION AND WINDING UP OF H.J. TYRRELL COMPANY, INC., ANY CLAIMS AGAINST IT WILL BE BARRED UNLESS A PROCEEDING TO ENFORCE THE CLAIM IS COMMENCED WITHIN TWO (2) YEARS AFTER THE DATE OF PUBLICATION OF THE NOTICES AUTHORIZED BY STATUTE.

Rule Changes Since Update to Code of State Regulations

This cumulative table gives you the latest status of rules. It contains citations of rulemakings adopted or proposed after deadline for the monthly Update Service to the *Code of State Regulations*, citations are to volume and page number in the *Missouri Register*, except for material in this issue. The first number in the table cite refers to the volume number or the publication year—26 (2001), 27 (2002) and 28 (2003). MoReg refers to *Missouri Register* and the numbers refer to a specific *Register* page, R indicates a rescission, W indicates a withdrawal, S indicates a statement of actual cost, T indicates an order terminating a rule, N.A. indicates not applicable, RUC indicates a rule under consideration, and F indicates future effective date.

PLANNING TO FILE AN EMERGENCY RULEMAKING???

Tip: Please be certain to review section 536.025, RSMo 2000, very carefully when preparing your emergency statement. There are very strict statutory criteria that must be present before an emergency rulemaking can be approved.
